

# EOD Vehicle

System Type: Vehicular Radio System  
Customer: Romanian Air Force  
End User: EOD Battalion  
Interactive Role: Prime Contractor  
Project timeframe: 2007 to 2008

The EOD vehicle is a fully integrated custom tactical communications vehicular system, using as platform an armored URO VAMTAC vehicle.

The vehicle is fitted with a protected cabin for the crew and internal staging area. It is equipped with a fully integrated mission electronic, robotic and surveillance system for specific missions.

The system is equipped with RF-5800 FALCON™ II series HF. The RF-5800H-V002 RF-FALCON™ II 150 Watt HF radio system provides advanced capabilities for secure high-speed data and digital voice

operation in both fixed and ECCM modes. The EOD vehicle supports HF voice and data communication requirements while "On-the-Move" or while deployed in a "Static" location.

Interactive performed the following activities in order to deliver a turn-key system:

- System design and engineering;
- Installation and integration of the purchased equipment and the CFE equipment in the communications vehicle;
- Provide the necessary markings to installed components to ensure proper functional guidance for end users.
